

Size, Proportion, Substance: **Size** - Weight usually 8 to 10 pounds, and should not exceed 12 pounds. Type and quality are of greater importance than weight, and a smaller dog that is sturdy and well proportioned should not be penalized. **Proportion** - Square, as measured from point of shoulder to rearmost projection of upper thigh and from withers to ground. **Substance** - Thickset, compact with good balance. Well boned.

AMPLIFICATION:

A compact, cobby, well-balanced Griffon with good muscle, bone, and substance, weighing 8 to 10 pounds, will be a small dog. Griffons often take two to three years to mature. These solid little Toys are often heavier than they appear. More important than weight, since there is no disqualification for weight or size, is the little square package with substance, overall balance, and breed type.

UNDESIRABLE:

Excessively large or extremely small. Racy or weedy. Too fat. Underdeveloped muscle. Too fine or too coarse.
